TAREON

OFFICIAL REALWEAR RESELLER

CONNECTED WORKER SOLUTIONS · SECURITY OPERATIONS

See what your guards see.

Hands-free, voice-controlled RealWear headsets that put your control room beside every guard: at the gate, on patrol and inside hazardous areas.

Live video to your control room

Supervisors see the scene from the guard's point of view and direct the response.

Hands-free incident capture

Photos and video by voice, while hands stay on the torch, radio or search.

Certified for hazardous areas

Navigator Z1 is certified for ATEX Zone 1, for flow stations, depots and tank farms.

THE CHALLENGE

Where security operations lose sight, time and evidence

Each gap is a decision made without eyes on the scene.

01 Blind spots beyond CCTV

Fixed cameras watch gates and fences, not the pipeline right-of-way, the tank-farm walkway or the far corner of the yard where incidents actually unfold.

02 Second-hand escalation

Incidents described over the radio lose detail. Supervisors and clients decide what to do without seeing the scene for themselves.

03 Weak incident evidence

Handwritten logs and phone photos taken after the event make reports slow to compile and easy for clients, insurers or investigators to question.

04 Proof of patrol

Clients want to know that every round and checkpoint was covered as contracted. A paper logbook cannot show what the guard actually saw.

05 No free hands, no heads-down

Torch, radio, vehicle searches and access logs leave no hand for a phone, and looking down at a screen on patrol is a safety risk in itself.

06 Offline where risk is highest

At flow stations, depots and tank farms, ordinary phones are not permitted in hazardous (Ex) zones, so patrols lose their digital tools exactly where it matters.

USE CASES

Six ways to put eyes on every incident

1 **Live “see what I see” escalation**
The guard says “call control room”; a supervisor sees the scene live on Teams, Zoom or Webex and directs the response.
Gap 01 · Gap 02

2 **Hands-free incident capture**
Photos and video captured by voice on the 48 MP camera as the incident unfolds, ready for the report the same shift.
Gap 03 · Gap 05

3 **Digital patrol rounds**
Checkpoint lists in the guard's eyeline, each stop confirmed with a photo: a patrol record for clients, not a logbook.
Gap 04

4 **Gate, access and vehicle checks**
A remote supervisor checks documents, seals and loads in real time before release, while the guard's hands stay free.
Gap 02 · Gap 05

5 **Hazardous-area patrols**
Navigator Z1, certified for ATEX Zone 1 and CSA Class I Div 1, keeps patrols connected at flow stations, depots and tank farms.
Gap 06

6 **Night rounds and perimeter checks**
Fences, right-of-way markers and plant rooms recorded on the move; the thermal module adds close-range heat checks.
Gap 01 · Gap 03

Plus: on-the-job coaching

New guards are talked through site procedures live by an experienced supervisor. Gap numbers refer to the challenges on page 2.

THE SOLUTION

RealWear devices, deployed and supported by Tareon

Navigator 520

GATES AND PATROLS

IP66, 2 m drop-tested

Voice control in noise up to ~100 dBA

48 MP camera

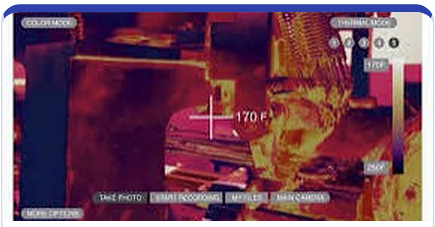

Navigator Z1

HAZARDOUS AREAS

Intrinsically safe

ATEX Zone 1, CSA C1/D1, IECEx

IP66 · 48 MP · Wi-Fi 6

Thermal module

NIGHT ROUNDS

Radiometric FLIR Lepton sensor

Fits Navigator 520 and Z1

Operated by voice

Why Tareon

Official RealWear reseller
Genuine devices, warranty and escalation.

Local deployment and support
Set-up, guard training and local support.

Works with your platforms
Teams, Zoom, Webex and TeamViewer Frontline; managed through RealWear Cloud.

Start with a pilot

1. **Discovery:** we map your sites, posts and escalation routes.
2. **Pilot:** 3 to 5 headsets on one site for 4 to 8 weeks.
3. **Review and scale:** results measured with you, then rolled out.

Book a live demonstration

See RealWear on your own site, with your own team.
